This Strategic Noise Map presents a graphical representation to weighted predicted annual average (Lden) and annual average night time (Lnight) road traffic noise levels in County Mayo. The map has been developed in accordance with S.I. no. 140/2006 (the Environmental Noise Regulations) and is a representation of the average environmental noise levels over one complete year. This map forms part of a national noise mapping strategy which can be primarily used as a strategic tool for large scale planning or policy matters and is not suitable for local noise assessments. National and regional roads deemed to be carrying in excess of 3 million vehicle passages per year were assessed in this national study.
